SHALINE M. DAVIDA

JUNIOR QA ENGINEER • shalinedavida@gmail.com • GitHub• LinkedIn

SUMMARY

QA-focused technology professional with project experience testing web and mobile application workflows, validating REST APIs, writing test cases, investigating bugs, and retesting fixes. Familiar with Postman, browser DevTools, Jira, and working across React interfaces, Django REST Framework APIs, PostgreSQL data, and a Kotlin Android application.

EDUCATION & COURSES

AkiraChix / codeHive — Diploma in Information Technology | February 2025 – November 2025

Courses: Quality Assurance, Backend Development, Frontend Web Development, Mobile Development, UX Research, UI/UX Design, Product Management

PROJECT EXPERIENCE

HaliCare

Collaborated on a mobile platform designed to connect people living with HIV/AIDS in Kenya to nearby clinics and counselling services, supporting access to care during USAID funding disruptions.

- Conducted primary and secondary research to understand user needs; contributed to UI wireframes and visual designs, a system architecture diagram, and an informational website built with HTML, CSS, and JavaScript.
- Worked with PostgreSQL database schemas and Django REST Framework APIs that managed user data and integrated external location APIs(Google Maps Api) to help users discover nearby clinics and counselling centres.
- Supported a React clinician/administrator dashboard designed to streamline booking workflows and patient-record management, alongside the mobile application experience.
- Developed and executed test cases, considered edge cases, and participated in debugging to improve reliability and user experience. Used Postman and browser DevTools to investigate issues and validate API responses.

CoopConnect

Collaborated on a team that helped digitise cooperative management and farmer training scheduling.

- Conducted primary and secondary research into cooperative-management needs, including planning and scheduling farmer training sessions.
- Designed logos, mockups, and UI wireframes in Figma and Adobe Illustrator; created an architecture diagram describing system components and interactions.
- Worked with project components including an HTML/CSS/JavaScript informational website, PostgreSQL database schema, Django REST Framework APIs, and a React dashboard for cooperative administrators.
- Developed and executed test cases to assess product quality and reliability and used Jira to support agile task tracking.

SKILLS

Quality Assurance: Manual Testing, Test Case Design and Execution, API Testing, Integration Testing, Edge-Case Testing, Bug Investigation and Retesting

Tools: Postman, Browser DevTools, Cypress, Jira, Git, GitHub, GitHub Actions, JMeter

Technical: REST APIs, Django REST Framework, React, JavaScript, TypeScript, Python, SQL, PostgreSQL, MySQL, Kotlin
